NordVPN Has Completed an Industry-First Audit of Its No-Logs Policy

December 13, 2018. NordVPN, one of the world's leading VPN (Virtual Private Network) service providers, has hired independent auditors from a prominent "Big 4" auditing firm to conduct an in-depth audit on their no-logs policy. According to NordVPN, they are 'very pleased' with the audit results of a VPN's logging policies and the report.

"We are very pleased with the results of the audit. We believe that they accurately reflect our responsibilities to our clients and the values upon which our service is built," says Marty P. Kamden, CMO at NordVPN. "The auditors' goal was to see if we live up to our claims of providing a no-logs VPN service, and we believe we've passed the test."

An audit like this has never been performed on a VPN service before. The independent auditors reviewed NordVPNs servers and code, as well as interviewed the employees in charge of maintaining the service.

"By allowing auditors into our servers to perform audit, we've set a new standard for other leading VPNs in the market," says Marty P. Kamden, CMO at NordVPN. "We also intend to regularly audit our service in the future to help verify our systems remain in place. Hopefully, other VPNs will follow suit, as that can only lead to more privacy and security for everyone."

Users who had a NordVPN account before November 1st can read the full audit report by logging into their web user accounts.

The audit was performed between October 29th and November 8th. It applies to NordVPN's service and server configuration as of November 1st, 2018.

NordVPN is a trusted online security tool, used by over 8 million internet users worldwide. The Panama-based company offers military-grade encryption with advanced privacy solutions to ensure secure access to all online resources. It is also recognized by the most influential tech sites and IT security specialists.
